PRODUCT DESCRIPTION

The iDTRONIC RFID Labels are leading products for industrial, logistic and retail applications. The state of the art transponders are available with paper or synthetic materials which protects the antenna and chip technology underneath.

Thanks to their strong adhesive layer with release paper (on the backside of the label), they can be easily fixed on a wide variety of surfaces. On request we offer an on metal version for metallic surfaces.

Due to a extremely flexible production process, the RFID labels can be offered with different transponder IC's, dimensions, materials and finishing options.

In addition to our extremely flexible production, we do offer a variety of customization options such as printing, encoding and sorting.
